A clear choice for clean air.

Blue Sky DEF - The Clear Choice

Blue Sky DEF is a diesel exhaust fluid designed to meet the needs of all new 2010 diesel engine powered vehicles using SCR technology. Blue Sky DEF reduces nitrogen oxide emissions by 90% and improves fuel efficiency by up to 5%. It is a simple-to-use, low cost, clean solution for meeting the new 2010 EPA Clean Air requirements. Prime Lube, Inc., a leading manufacturing and distributor of petroleum and lubrication products, is proud to offer this trusted emission-control solution to its North American customers.

Our Quality Management Process

Purity of diesel exhaust fluid is important to maintaining a functioning SCR system. Any chemical impurity in DEF can lead to failure of an SCR system. That is why it is very important to use only DEF products that meet ISO 22241 standards. We ensure a quality product with an extensive, redundant quality management process, controlling specifications through the entire product channel—from manufacturing through distribution to the end user.

Choosing the Right Solution

Blue Sky DEF will be available in the right size to meet your needs. We are a full-service provider that offers:

- Patented-dispensing and spill-proof 1/2 gallon bottles for 2010 diesel passenger cars and SUVs
- 2.5 gallon jugs with/without dispensing nozzles
- 55 gallon drums
- 275 gallon IBC Totes (open or closed system)
- Mini-bulk stations from 800 to 2700 gallon, fully self-contained, above ground systems
- Stand-alone pumping stations for both above-ground and below-ground installations
- Complete line of dispensing hardware, plumbing and accessory equipment to complement or enhance container dispensing.

Product Handling/Storage Information

- Optimal storage temperature: 23°F to 77°F
- Avoid direct exposure to sunlight
- Please take note of applications and materials compatibility! Please see “Product Specification” and “Exposure to DEF” data sheets! DEF is mildly hazardous to water.
- ISO22241 standards require the use of stainless steel and/or certain plastics, e.g. high density polyethylene (HDPE) or polypropylene, that come in contact with DEF in order to prevent SCR failure.
- Materials specifically not recommended include non-ferrous metals and alloys (copper, aluminum, magnesium, silver, zinc and lead), solders containing non-ferrous metals, and nickelcoated plastics and metals.
- CAUTION! DO NOT MIX WITH DIESEL FUEL.
